The screenshot shows the AWS Management Console interface for editing inbound rules on a Security Group. The browser address bar shows the URL: `us-east-1.console.aws.amazon.com/ec2/home?region=us-east-1#ModifyInboundSecurityGroupRules:securityGroupId=sg-01119782ad6e6a5`. The page title is "Edit inbound rules". Below the title, a note states: "Inbound rules control the incoming traffic that's allowed to reach the instance."

The main content area is titled "Inbound rules" and contains a table of existing rules. The table has columns: Type, Protocol, Port range, Source, and Description - optional. There are four rules listed:

Type	Protocol	Port range	Source	Description - optional	Action
HTTPS	TCP	443	Custom		Delete
SSH	TCP	22	Custom		Delete
HTTP	TCP	80	Custom		Delete
Custom TCP	TCP	8050	Anywhere...		Delete

Below the table, there is an "Add rule" button. At the bottom of the page, a yellow warning banner states: "Rules with source of 0.0.0.0/0 or ::0 allow all IP addresses to access your instance. We recommend setting security group rules to allow access from known IP addresses only." To the right of the banner are buttons for "Cancel", "Preview changes", and "Save rules".

Tablero corriendo en la URL: <http://34.203.229.76:8050/>
